Full-stack software engineer with 8 years of experience building enterprise web applications and APIs using C#, .NET, PHP (Laminas/Mezzio), SQL and more recently TypeScript/React. Experienced in designing data-driven systems for healthcare operations, including document management, automated reporting, background processing, and user-facing tools that help stakeholders act on complex information. Experienced with REST APIs, Git-based workflows, CI/CD, centralized logging, and modernizing legacy applications into scalable, maintainable solutions.

TECHNICAL SKILLS AND CORE QUALIFICATIONS

- **Languages:** C#, PHP, SQL, TypeScript, JavaScript, HTML/CSS, C++
 - **Frameworks and Libraries:** .NET Core(minimal APIs), Laminas/Mezzio, React (TypeScript)
 - **Databases, Search & Messaging:** MariaDB/MySQL, SQL Server, RabbitMQ, Elasticsearch, Kibana
 - **Tools (CI/CD) & Platforms:** Git, Azure DevOps, Jenkins, PhpStorm, Visual Studio
-

WORK EXPERIENCE

Software Engineer

Sanford Health - Sioux Falls, SD | 01/2020 - Present

- Build and support internal healthcare web applications and APIs using PHP (Laminas) and .NET to streamline operations.
- Designed and implemented a .NET Core minimal Web API for document search that integrates with the Hyland OnBase API to retrieve single documents, document lists, PDF streams, document types, and misfiled documents.

- Developed and maintained a PHP (Laminas) front-end application that consumes the document search API, providing a UI for users to search, filter, sort and download documents efficiently.
 - Replaced an old, slow, hard-to-maintain document search system with a modern, modular architecture that is faster, easier to maintain and extend, and offers a more intuitive UI for users.
 - Used Git, Azure DevOps, and Jenkins for version control, pull requests, code reviews, and automated builds and deployments, ensuring code quality and consistent release practices across the team.
 - Used RabbitMQ to offload and automate background jobs for data loads and large report generation, preventing timeouts and keeping web requests fast.
 - Used Elasticsearch and Kibana, with Filebeat-based log ingestion, to centralize and analyze logs from web, queue, and database services for faster debugging and incident response.
 - Worked in a Vagrant-based virtualized Linux environment that spins up dedicated web, database, cache, Elasticsearch, and queue VMs to closely mirror development, test, and production environments.
-

Web Developer / Programmer Analyst

The Evangelical Lutheran Good Samaritan Society - Sioux Falls, SD | 07/2017 - 12/2019

- Designed and built a PHP-based Quality Tracking application that enabled the organization to create, schedule, and assign audits to specific locations, helping quantify the level of care residents received and providing reports to track audit outcomes.
 - Built a PHP Facility Assessment application that helped locations evaluate census, demographics, competency gaps, and resource availability through data-driven questionnaires and reporting.
 - Helped design and develop an Infections and Antimicrobial Tracking application that allowed users to track resident infections, assign antimicrobials, and complete survey questions to document each round of treatment.
-

PROJECTS

icyabu.com | Personal Project

- Built a full-stack personal website using a .NET backend and a React frontend with TypeScript, reinforcing recent experience with modern web application architecture and strongly typed frontend development.
 - Used the project to strengthen hands-on experience outside of work in technologies aligned with enterprise application development, including .NET and React/TypeScript.
-

EDUCATION

South Dakota State University (SDSU): Bachelor in Computer Science, Minor in Mathematics.
