

ISRAEL CYABUKOMBE

Israel.cyabu93@gmail.com | <https://github.com/israelCyabukombe>

Full-stack software engineer with 8 years of experience building enterprise healthcare applications in PHP (Laminas/Mezzio) and .NET, with expertise in senior care operations, document management, and designing automated reports that help stakeholders understand and act on their data.

TECHNICAL SKILLS AND CORE QUALIFICATIONS

- **Languages:** PHP, C#, SQL, HTML/CSS, JavaScript, C++, TypeScript.
 - **Frameworks and Libraries:** Laminas/Mezzio, .NET Core, React.
 - **Tools & Platforms:** Git, RabbitMQ, Elasticsearch, Jenkins, MariaDB (MySQL), SQL Server, PhpStorm, Visual Studio.
-

WORK EXPERIENCE

Software Engineer

Sanford Health - Sioux Falls, SD | 01/2020 - Present

- Build and support internal healthcare web applications using PHP (Laminas) and .NET to streamline workflows for operations teams.
- Designed and implemented a .NET Core minimal Web API for document search that integrates with the Hyland OnBase API to retrieve single documents, document lists, PDF streams, document types, and misfiled documents.
- Develop and maintain a PHP (Laminas) front-end application that consumes the document search API, providing a UI for users to search, filter, sort and download documents efficiently.
- Replaced an old, slow, hard-to-maintain document search system with a modern, modular architecture that is faster, easier to maintain and extend, and offers a more intuitive UI for users.
- Work in a Vagrant-based virtualized Linux environment that spins up dedicated web, database, cache, Elasticsearch, and queue VMs to closely mirror dev, test, and production.

- Use Git, Azure DevOps, and Jenkins for version control, pull requests, code reviews, and automated builds and deployments, ensuring code quality and consistent release practices across the team.
 - Use RabbitMQ to offload and automate background jobs for data loads and large report generation, preventing timeouts and keeping web requests fast.
 - Use Elasticsearch and Kibana, with Filebeat-based log ingestion, to centralize and analyze logs from web, queue, and database services for faster debugging and incident response.
-

Web Developer / Programmer Analyst

The Evangelical Lutheran Good Samaritan Society - Sioux Falls, SD | 07/2017 - 12/2019

- Designed and built a PHP-based Quality Tracking application that enabled the company to create, schedule, and assign audits to specific locations to quantify the level of care residents receive, including reports for tracking audit outcomes.
 - Built a PHP Facility Assessment application that helped locations understand census, demographics, competency gaps, and resource availability through data-driven questionnaires.
 - Helped design and develop an Infections and Antimicrobial Tracking application that allowed users to track resident infections, assign antimicrobials, and complete survey questions to document each round of treatment.
-

Education

South Dakota State University (SDSU): Bachelor in Computer Science, Minor in Mathematics.
